

S. M. Faysal Haque

Software Engineer

☎ (+88) 01788315890 ✉ smfaysalhaque007@gmail.com 🔑 GitHub

I am a passionate and dedicated individual with a strong desire to build a career in web development. The intricacies of this field fascinate me, and I am constantly eager to expand my skills and knowledge. I have developed a solid foundation in web development and seek continuous growth. Additionally, I am a positive, collaborative person who enjoys working with new people and discussing emerging technologies.

SKILLS

Programming Language: JavaScript, TypeScript, Go, C.

Backend & Databases: Go (Golang), PostgreSQL, RESTful API design with Gorilla Mux.

Frameworks & Libraries: React, Next, Vue, Nuxt, Vuex, Pinia, Zustand, Axios, Apollo.

UI Component Libraries: Material-UI (MUI), shadcn/ui, Radix UI.

Forms & Validation: React Hook Form, Zod.

Authentication: NextAuth.js / Auth.js (v4 & v5), JWT.

Data Visualization: Recharts, MUI X Charts.

Internationalization: next-intl, Nuxt i18n.

API & Communication: RESTful API, GraphQL.

Web Technologies: HTML5, CSS3, Service Worker, Responsive Web Design.

Styling Frameworks: Tailwind CSS, Vuetify, Bootstrap 5.

Tooling & Code Quality: ESLint, Prettier.

Development Tools: Git, GitLab, GitHub, VS Code, Chrome Dev Tools, Linux CLI.

Design: Figma.

Communication Tools & Project Management: Slack, Mattermost, Trello.

Familiar with: Astro, next-themes.

EXPERIENCE

TechnoNext Software Limited – Junior Software Engineer (Full Time) – (September 18, 2025 – Present)

I build production web applications with Next.js, React, and TypeScript. I developed the front end of a Lunch Management admin dashboard for managing employee meal services — menu and dish management, order tracking, employee management, a multi-stage complaint workflow, QR-based meal scanning, and downloadable reports. I also built the end-user portal of NextExtract, an API-gateway SaaS platform where users browse an API catalog, subscribe, and consume APIs through a credit-metered, encrypted gateway.

Sayburgh Solutions Limited – Junior Front-End Developer (Full Time) – (April 30, 2023 – September 17, 2025)

I developed the front end for the homepage, about us, and pricing pages of the SaaS product FoodQo (RMS). Additionally, I worked on a section of Sayburgh Solutions Ltd.'s website, creating a page for instructors offering online courses. I also contributed to the front end of products for online food delivery and tax payments for Eid-UI-Adha.

PROJECT EXPERIENCE

Lunch Management Admin Dashboard

A full-featured admin web application built with Next.js 16, React 19, TypeScript, and Material-UI for managing organization-wide employee meal services (both lunch and breakfast).

- Built a dashboard with real-time meal order statistics visualized through Bar, Pie, and Line charts using MUI X Charts.
- Developed lunch and breakfast menu/dish management modules, including image upload, starred items, and dish history tracking.
- Implemented employee management with search, pagination, and block/unblock functionality.
- Built a four-stage complaint management workflow (New, Replied, Solved, Archived) with date and status filtering.
- Implemented a QR code generation and scanning system for meal verification.
- Handled authentication and route protection using NextAuth.js with JWT and Next.js middleware.
- Managed global state with Zustand and forms with React Hook Form, integrated with a centralized Axios service layer and downloadable reports.

Technologies used: Next.js 16, React 19, TypeScript, Tailwind CSS, Material-UI (MUI), MUI X Charts, Zustand, React Hook Form, NextAuth.js, Axios, Day.js, react-qr-code.

NextExtract – API Gateway User Portal

The end-user web portal for an API-gateway SaaS platform, built with Next.js 16 (App Router), React 19, and TypeScript, where users browse an API catalog, subscribe, and consume APIs through a credit-metered, encrypted gateway.

- Built the API catalog, detail, and "try the API" live console with documentation, schema tables, and multi-language code samples.
- Developed a 7-route user dashboard (overview, usage, credits, subscriptions, profile, support) with a sidebar shell and Recharts-based usage analytics.
- Implemented authentication with Auth.js v5 (NextAuth), JWT, and a session-transport seam for refresh tokens.
- Added multi-language support (English/Bengali) with next-intl and light/dark theming with next-themes.
- Built forms and validation with React Hook Form and Zod, and the UI with shadcn/ui and Radix UI.
- Followed a feature-sliced architecture with a strict one-way dependency rule enforced by ESLint, and a single-file native fetch API client.

Technologies used: Next.js 16, React 19, TypeScript, Tailwind CSS, shadcn/ui, Radix UI, Auth.js (NextAuth v5), next-intl, next-themes, React Hook Form, Zod, Recharts, Sonner.

Foodi & Cartup

I have also worked on Foodi and Cartup, two well-known live projects in Bangladesh. My contributions ranged from fixing design issues across Cartup's entire admin panel to implementing new features, along with experience working on the design of Foodi's inventory module. I have also fixed bugs that came up in these live releases.

Stock Management REST API (Go + PostgreSQL)

A RESTful CRUD API built with Go and PostgreSQL for managing stock records (name, price, company), using Gorilla Mux for routing.

- Designed and implemented RESTful endpoints for creating, reading, updating, and deleting stock records.
- Built a PostgreSQL database connection layer using lib/pq, with environment-based configuration via godotenv.
- Structured the codebase into modular packages (router, middleware, models) for separation of concerns.
- Handled JSON request/response encoding and decoding for all API endpoints.
- Implemented query parameter handling and dynamic routing (e.g., fetch/update/delete by stock ID) using Gorilla Mux.

Technologies used: Go, PostgreSQL, Gorilla Mux, lib/pq, godotenv, RESTful API design.

e-Food Delivery Platform

The project was developed using Nuxt 3 and TypeScript. My tasks included:

- Developing the entire front-end web design.
- Using a service worker to repeatedly call the refresh token.
- Creating various types as needed for TypeScript.
- Dynamically rendering multiple components within a single component.
- Navigating routes and conditionally displaying or hiding components or content based on API calls.
- Adding various confirmation modal components.

Technologies used: Tailwind, Nuxt 3, TypeScript, Pinia, LocalStorage, Axios, Service Worker, Dynamic Routing.

SaaS (RMS) product FoodQo Homepage UI (Live)

- Nuxt 2 was used for the project's work. Nuxt.js is a framework built on top of Vue.js.
- Storyblok CMS was utilized, which helps the client easily modify various content on their website.
- Nuxt/i18n was implemented, allowing the entire website to be easily switched between Bengali and English.
- The website used the Tailwind CSS framework for styling, making the site more attractive. This enabled the creation of various animations, such as an infinite slider.

Technologies used: Tailwind, Nuxt 2, Storyblok CMS, Nuxt/i18n.

EDUCATION

Daffodil International University–DIU, Dhaka, Bangladesh.

Bachelor of Science – B.Sc., Computer Science and Engineering, 2021.
